

Anthony Moncion

Product design

RUCA OS

Desktop product system

One shell brings readiness, commands, media, live context, diagnostics, and controls together. The current direction uses the System Heart, mechanical gauges, and a galaxy field.

My work: product direction, information architecture, interaction requirements, visual direction, and implementation review.

Public demo: an interactive simulation with demonstration states.

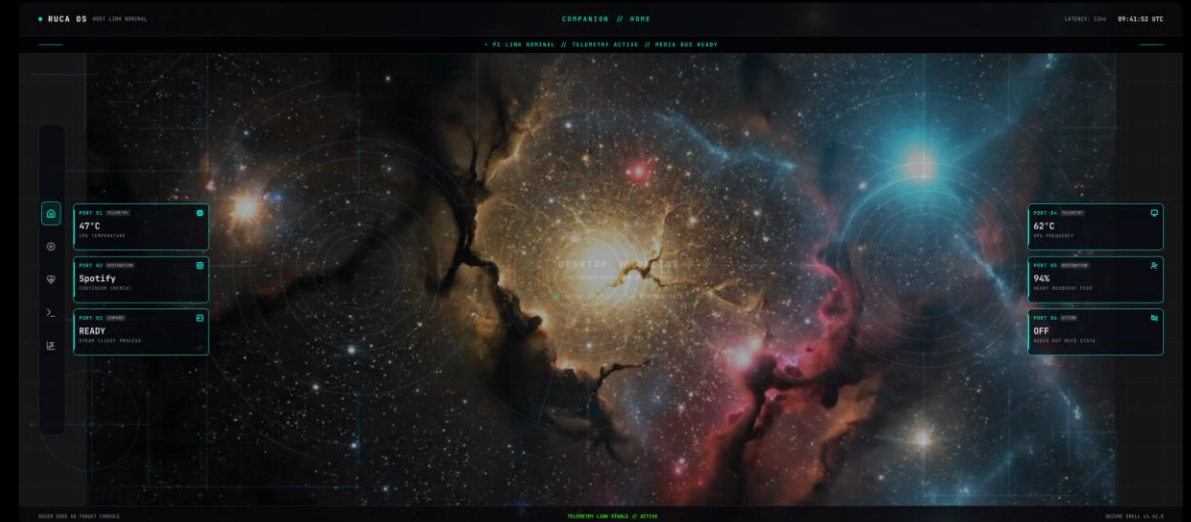

RUCA OS Mobile Companion

Current V1 design

A touch interface with six configurable HOME ports and five destinations: HOME, MEDIA, SYSTEM HEART, COMMAND DECK, and DIAGNOSTICS.

Connection feedback and consistent command meaning keep the companion aligned with the desktop product.

Current Figma frame exported September 10, 2026.

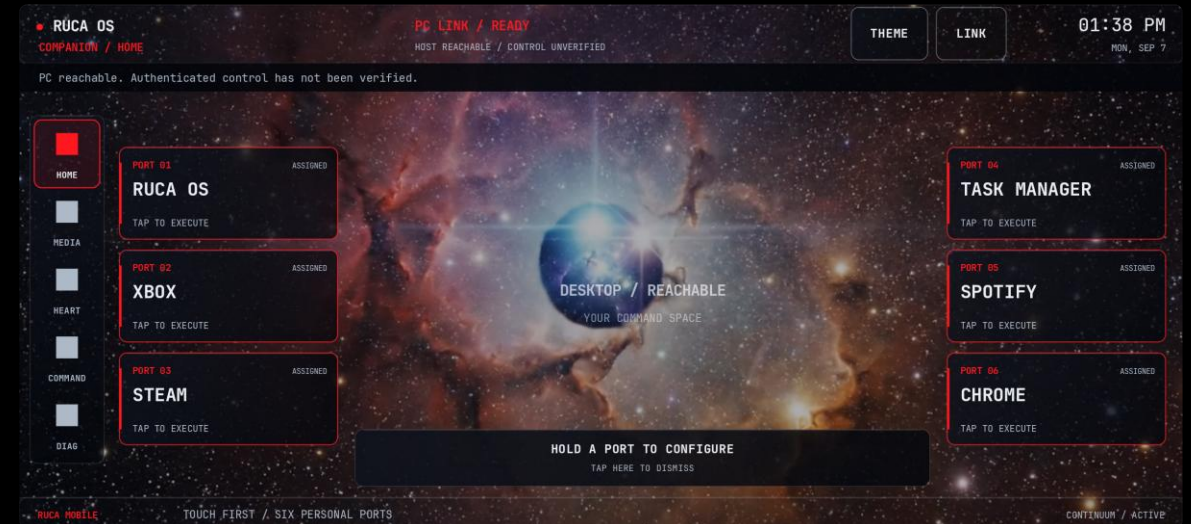

The native Android foundation

Device validation evidence

The existing Android implementation provides a working companion foundation. This screenshot records the native HOME surface during device validation on September 7, 2026.

The current V1 design and the installed build represent different stages of the product. The portfolio labels each source and date.

Capture precedes later repairs on the same day.

Workflow and service design

La Cosa Nostra Design Studio

An independent local prototype for AI-assisted work. Missions carry project context, assigned responsibility, progress, and review evidence. Human approval remains explicit before consequential actions.

My work: workflow architecture, mission lifecycle, state language, and product direction.

Summer Grocery Delivery in the Catskills

A service design proposal for seasonal fulfillment. Delivery zones, order stages, staging, dispatch, and exception paths connect physical work with visible information.

My work: territory structure, order lifecycle, physical flow, and exception handling. Implementation and operating outcomes remain unvalidated.

From operations to product design

Experience that shapes the work

Postal operations and hospitality inform how I design handoffs, state, recovery, and the information people need to act.

Operational responsibility

USPS work supported approximately 75 employees and 49 city and rural routes.

Interaction design

Figma, information architecture, product requirements, and working prototypes.

Google UX Design

Professional Certificate completed July 10, 2026.

Google Advanced Data Analytics

Professional Certificate completed July 31, 2026.
